# SAFETY THROUGH TRANSPARENCY IN CORRECTIONS

In an environment where a situation can change in an instant, safety means everything for officers and inmates. Unifying body cameras and IP surveillance cameras into a single view can increase safety through situational awareness and transparency, reducing volatile circumstances. Recording inmate interactions offers non-biased representation of a situation, giving command staff a true understanding of what occurred.

Utility's universe of solutions include camera access through POLARIS™ by Utility, a complete incident management platform. Camera live streaming, automated recording triggers, geofence technology, and video storage management are all included. Additional solutions comprise in-vehicle cameras for transport vehicles and existing facility IP camera integration - all possible through a single platform.

## **AUTOMATED SYSTEM ALERTS:**

Generate recordings through policy-based automation with life-saving, system-wide alerts such as Utility's Officer Down notification

## **NON-BIASED INCIDENT CAPTURE:**

Capture video of the true event with audio in critical instances and challenging inmate situations - offering command staff immediate review capability

## **INCIDENT & EVIDENCE MANAGEMENT:**

Complete incident and evidence management in one platform. Locate, monitor, and live stream through connected body and facility cameras. Securely store, review, edit and share media in a roles and permissions based system.

## **A COMPREHENSIVE CORRECTIONS SOLUTION INCREASING OFFICER AND INMATE SAFETY THROUGH TRANSPARENCY**

- Body camera uniform integration
- Real-time media wireless offload
- GPS location and Live Streaming
- Flexible recording policy and automation
- Critical system alerts:
  - Officer Down and Officer Running
- Evidence management tools
  - Secure video storage, organization and classification
  - Manage evidence from other sources (text & email messages from inmate tablets)
  - Redaction and editing
- In-Vehicle camera system (5+ cameras)
- Jail Management System integration
- Facility IP camera integration
  - Use existing camera/VMS systems
  - Sensor integration (access control, ankle monitors)
