

STRAX[®] Response is a real-time crime center (RTCC) platform that unifies information from disparate technologies and data sources into a single pane of glass. The cloud-native, map-based solution enhances real-time situational awareness, expedites actionable intelligence for better response and incident management, and streamlines multi-agency collaboration – all while increasing the safety of first responders and security personnel, as well as the communities they serve.

STRAX RESPONSE integrates alerts, video analytics, private & public video feeds, CAD/RMS, and other sensors into a real-time crime center

- **EARLY DETECTION & MITIGATION:** Multiple alert queues organize activity to improve detection, allow for quick verification, and possibly prevent emergencies.
- **INCREASE SITUATIONAL AWARENESS:** Real-time access to video feeds, sensors, and incident related data in a single, map-based platform expedites response and enhances safety.
- **ENHANCE COLLABORATION AND DECISION MAKING:** Quickly gather information and disseminate critical intelligence across locations, departments and agencies.
- **MODERN ARCHITECTURE:** CJIS compliant, cloud-native platform enables integration with existing and future technology.

- Create and maintain pre-plans in a centralized location for easy access and dissemination in preparation for both planned events and unplanned incidents.
- Integrate cameras, sensors, and systems and create automated workflows to accelerate verification and escalation of alerts.
- Investigate alerts immediately with real-time access to near-by cameras, data, and sensors to expedite response.
- Collaborate and coordinate incident response using a single platform to access cameras, drones, data systems, analytics and other critical information, all geolocated in a map-based interface.
- All incident related activities available to replay and review incidents for both investigative and training purposes.
